

FOR IMMEDIATE RELEASE

EXCLUSIVE REP COVERAGE

Northern California and Northwestern Nevada

Marina, CA - November 11, 2019 - Fox Thermal and Air Monitor are pleased to announce CTI Controltech as the new exclusive representative for industrial markets in Northern California and Northwestern Nevada effective November 18, 2019. CTI's experienced sales team and knowledge of industrial process make them the ideal partner for supporting customers with gas flowmeter applications.

Fox Thermal is a leading manufacturer of Thermal Mass flowmeters with products designed for gas flow applications found anywhere from light industrial applications to the most demanding Oil and Gas applications. Their DDC (Direct Digitally Controlled) Sensor, allows for configuration changes in the field that have never been possible with thermal dispersion technology before.

Air Monitor specializes in gas flow applications in large ducts with limited straight-run available. We design and manufacture flow stations that include self-averaging Fechheimer pitots and ultra-low range differential pressure transmitters. Some designs also include auto-purge systems for dirty service. These systems are typically used to measure combustion airflow but can be used in any large duct application such as quench exhaust, aeration to digestors, and even dust collection systems.
